Species for which "R" goals are established generally meet the following criteria

- management of the species can be addressed within CALFED's mission,
- the year-long or seasonal range of a species is entirely or nearly entirely within the legal Delta and/or Suisun Marsh and Bay (i.e., the Delta Basin and Suisun Marsh and San Francisco Bay ERP ecological management zones [see Section VI],
- CALFED could be reasonably expected to undertake all or almost all of the actions necessary to recover the species (e.g., a sufficient proportion of a species range is located within the CALFED solution area to allow recovery of the species); and
- the species are listed, proposed, or candidates for listing under the California and/or federal Endangered Species Acts, or the species is in sufficient decline that special attention to its restoration needs is appropriate

Species for which "r" goals are established generally meet the following criteria

- management of the species can be addressed within CALFED's mission,
- CALFED actions would affect only a limited portion of the species range and/or CALFED actions would only have limited effects on the species;
- CALFED could be reasonably expected to undertake actions to contribute to the recovery of the species, but not be expected to implement all actions that may be needed to fully recover the species, and
- the species are listed, proposed, or candidates for listing under the California and/or federal Endangered Species Acts, or the species is in sufficient decline that special attention to its restoration needs is appropriate

Species for which "m" goals are established generally meet the following criteria

- management of the species is not addressed within CALFED's mission (species is primarily found outside the Delta or Suisun Marsh) and
